

FOR ANKARSUM

Where your German customers come from. And *where they go next.*

A map of how people move through your German website. Germany is one of your two mature markets, alongside Sweden.

A data-driven snapshot of the German twelve months.

WHERE GERMANY STANDS TODAY

99k SESSIONS, 12 MONTHS	1,599 PURCHASES
€620k REVENUE	1.61% CONVERSION RATE

KEY FINDINGS

WORKING	A mature, brand-led market. Search is almost entirely brand terms, and PMax plus Direct drive most of the traffic and revenue.
ASSET	Colour drives product discovery. The Assistent Original collection and its colour variants are the most-visited product pages by a wide margin.
ASSET	A strong owner economy. Accessories convert at 4% and spare parts at 8%, several times the mixer collection rate.
FRICTION	Paid Social shows a wide attribution gap. Meta reports ROAS 6.56. GA4 sees a 0.12% on-site conversion rate (last non-direct).

PRIORITY MOVES, IN ORDER

- 1 **Make colour the spine of merchandising.** German buyers choose by colour. Lead with it on the home page, in email and in seasonal launches.
- 2 **Scale the accessory and spare-parts engine.** The owner economy converts several times better than the mixer page. Build a dedicated flow for it.
- 3 **Read Paid Social with both lenses.** Verify Meta's reported ROAS against Shopify orders, improve the on-site close for Meta visitors.
- 4 **Understand the Referral engine.** Referral converts at 5.6%, the highest of any sizeable channel. Map the sources and protect them.

SCOPE OF THIS DECK

This is a data foundation. It describes how Germany behaves in the channels and analytics we measure today. It is intended as an input to the strategy agency's continued customer journey, persona and positioning work, not as a replacement for that work. Cyntora is happy to extend any of the threads here on request.

THE BIG IDEA

The brand is known.
The buyer chooses by *colour*.

SESSIONS (12 MONTHS)

€620k

TWO MARKET TYPES, TWO DIFFERENT JOURNEYS

Germany is a *mature* market. It behaves quite differently from a *new starter*.

MATURE MARKETS · YOU ARE HERE

Germany, Sweden

- **Brand awareness is built.** Search is almost entirely brand terms. Direct visits and PMax dominate the traffic mix.
- **Customers arrive with intent.** The mixer purchase is the goal of the visit, not a discovery.
- **Conversion happens deep in the funnel.** The home page and the Assistant Original collection close most of the sale.
- **The choice is configuration, not whether.** Colour variant, accessories and bundle, rather than "is this brand real".
- **An owner economy exists.** Accessories and spare parts convert several times better than the mixer itself.

NEW STARTER MARKETS · FOR CONTRAST

USA, United Kingdom

- **Awareness is still being built.** Paid Search and PMax carry more of the load while brand recall grows.
- **Customers compare and verify.** They look at reviews, check local availability, compare to alternatives.
- **Aesthetic and trust signals matter more.** Colour variants in the US, retailer pages and warranty info in the UK.
- **Price-sensitive sub-segments exist.** Refurbished and sale categories pull real attention.
- **USA is the larger new starter, UK is the smaller.** Both need awareness work, just at different scales of investment.

The recommendations in this deck assume Germany's mature-market behaviour. Different moves apply in your new starter markets, USA and the UK.

A PORTRAIT DRAWN FROM THE DATA

They already know the brand. They come to choose a configuration.

The Decided Buyer

PRIMARY VISITOR TYPE

01

THEY SEARCH THE BRAND BY NAME

The top queries are "ankarsrum" (5,622 clicks) and "ankarsrum küchenmaschine" (2,058). The only sizeable non-brand term is "schwedische küchenmaschine" (180). Awareness is already built.

02

THEY LAND ON THE COLLECTION AND PICK A COLOUR

After the home page, the Assistent Original collection draws 17,976 sessions and the colour-variant product pages take most of the rest. The decision on site is which colour, not whether.

03

MANY COME BACK AS OWNERS

"ankarsrum zubehör" and "ankarsrum ersatzteile" are high-intent searches, and the accessory and spare-parts pages convert several times better than the mixer itself.

FROM BRAND SEARCH TO CHECKOUT

How a typical German customer reaches you.

THE FIVE CHANNELS THAT MATTER

PMax brings the volume. Direct and Referral close hardest.

A PATTERN IN THE PRODUCT PAGES

Colour is how Germany chooses.

After the home page and the Assistent Original collection, the most-visited product pages are colour variants. The German customer arrives decided on the brand and uses the site to choose a colour. That makes colour the most important merchandising lever you have.

A HIDDEN SECOND ENGINE

The owner economy converts several times better.

Accessories convert at 4% and spare parts at 8%, against 1.2% for the mixer collection. A buyer who already owns the machine is the most efficient customer you have, and Germany's owner base is large enough to build a dedicated engine around.

THE SAME CHANNEL, MEASURED TWO DIFFERENT WAYS

Meta says it works. GA4 sees less of it.

WHAT META REPORTS

From the ad platform

160

PURCHASES ATTRIBUTED

6.56x

RETURN ON AD SPEND

896k SEK

REVENUE ATTRIBUTED BY META

Meta credits journeys that involve a Meta touchpoint within its click and view-through windows. The German Meta account is billed in SEK as part of central billing. By this measure the channel is delivering a strong return.

WHAT YOUR SITE SEES

From Google Analytics

8

PURCHASES ATTRIBUTED

0.12%

CONVERSION RATE

6,912

SESSIONS ARRIVING FROM PAID SOCIAL

GA4 uses last non-direct, which credits the channel that touched the customer last. By that measure Meta visitors rarely close on the same visit.

Both numbers are real. They measure different things. Meta sees the assisted contribution across days; GA4 sees the on-site close in one session. The 160 vs 8 gap is wider in Germany than in most markets. The action is not to defund Meta, it is to verify Meta's attribution against actual Shopify orders and improve the landing experience for Meta visitors.

FOUR ACTIONS, ORDERED BY IMPACT

Concrete moves the data supports.

I

Make colour the spine of merchandising

Colour variants are the most-visited product pages, so the on-site decision is which colour, not whether. Lead the home page with colour, add a colour finder, run seasonal colour launches, and segment email by colour interest. Lifestyle photography per colour does more work here than feature copy.

IMPACT
High

EFFORT
Medium

KPI
Colour-variant page CR; colour-segmented email engagement

2

Scale the accessory and spare-parts engine

Accessories convert at 4% and spare parts at 8%, several times the mixer collection. The audience is existing owners. Build a dedicated post-purchase email flow, a clear Zubehör and Ersatzteile navigation, and a retargeting campaign aimed at owners. High margin on attention.

IMPACT
Medium

EFFORT
Low

KPI
Zubehör + Ersatzteile revenue MoM; owner repeat rate

3

Read Paid Social with both lenses

Meta reports ROAS 6.56 and 160 purchases. GA4 sees 8 on a last non-direct basis. Both are real within their own model. The honest action: verify Meta's purchase tracking against actual Shopify orders, and improve the on-site experience for Meta-arriving visitors so more close on the first visit. The channel is contributing. The question is how much.

IMPACT
Medium

EFFORT
Medium

KPI
Meta vs GA4 gap; verified Shopify orders from Meta

4

Understand and protect the Referral engine

Referral converts at 5.6%, the highest of any sizeable channel, and contributes €96k in revenue. We do not yet know exactly which sites and partners drive it. Map the referral sources, identify the highest-value partners and retailers, and protect and deepen those relationships before anything else changes.

IMPACT
Medium

EFFORT
Low

KPI
Referral source mix; revenue per referring domain

BUILDING ON THESE FINDINGS

What we recommend tackling next.

- O1** **Data-driven personas**
Three German personas built from landing pages and search queries: The Decided Buyer (brand search, colour choice), The Colour Chooser (variant-led browsing), The Owner (accessories and spare parts). The data exists, it needs structuring and a shared language.
- O2** **Colour-led merchandising test**
A home-page colour finder and colour-led hero, plus colour-segmented email. Measure lift on colour-variant page entries and conversion over four to six weeks.
- O3** **Build the owner funnel**
Post-purchase email flow for accessories and spare parts, clearer Zubehör and Ersatzteile navigation, and a retargeting campaign aimed at existing owners.
- O4** **Referral source audit**
Map which sites, retailers and partners drive the 5.6% Referral channel, rank them by revenue, and build a plan to protect and deepen the most valuable relationships.

FOR THE ANALYTICALLY CURIOUS

The full channel breakdown.

CHANNEL	SESSIONS	% OF SESSIONS	PURCHASES	% OF PURCHASES	CONVERSION RATE	REVENUE (EUR)
Cross-network (PMax)	45,316	45.7%	612	38.3%	1.35%	257,487
Direct	17,309	17.4%	392	24.5%	2.26%	149,315

TRANSPARENCY ABOUT THE DATA

Where the numbers come from.

DATA SOURCES

- **Google Analytics 4**
Sessions, channels, landing pages, ecommerce events for www.ankarsrum.de
- **Google Search Console**
Organic search queries and ranking positions for ankarsrum.de
- **Meta Ads** (via Windsor AI)
Spend, reach, purchases and ROAS for the German Meta account
- **Shopify** (via Windsor AI)
Order, product and country data for the German store

WHAT TO KNOW ABOUT THE NUMBERS

- Germany is a separate domain, ankarsrum.de, and reports in EUR. The measurement period covers 15 May 2025 to 14 May 2026, one full season including the Christmas peak.
- GA4 records 1,599 transactions for the .de domain. The dedicated German Shopify store is smaller on its own; the domain also routes some checkout through a shared European store. GA4 is the on-domain figure used throughout this deck.
- The German Meta account is billed in SEK as part of central billing, so Meta revenue is shown in SEK while site revenue is in EUR. ROAS and purchase counts are currency-neutral.
- Attribution uses last non-direct in GA4. Meta and Google Ads report against their own internal models, which produce different totals for the same underlying purchases.

THANK YOU

The map is drawn.
Now we can *move the pins.*

A snapshot of your German customers, drawn from twelve months of real behaviour.
